

Mecanocconcept

One concept, multiple solutions

Mechanized System

INDUSTRIALIZED AND INTUITIVE SYSTEM

The Mecanocconcept comprises a series of solutions with features in common: lightweight components throughout (designed with duraluminum) and semi-rigid joints between the components comprising each solution, for an industrialized approach to formworking turning it into an intuitive, simple mechanical process.

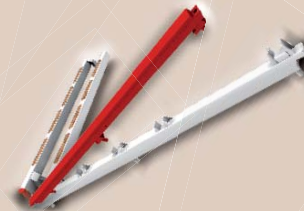

Productive System

SAVE TIME ON FORMWORK

Since it makes formworking a simple, mechanical process, productivity rates are high. The Mecanocconcept saves you substantial time on formworking tasks, always ensuring the highest quality finishes and guaranteeing safety at every stage of a formworking project.

Three Basic Elements

www.mecanocconcept.com

Clearing

COST SAVINGS ON MATERIALS USED

Clearing that stresses savings on the formwork equipment used. Three days after pouring concrete, 80% of the equipment can be recovered so it can be used on framing an upper slab. The remaining 20% of the equipment is left shoring the poured floor for 21 to 28 days. Accordingly, you can maximize the use of formwork equipment for concrete slabs.

Versatile System

IDEAL FOR ANY TYPE OF SLAB AND CONSTRUCTION TYPOLOGY

The mecanocconcept guarantees the best possible solution for any type of formwork, regardless of the construction typology. The various mecano systems adapt perfectly to the client's specific needs, always achieving the most appropriate, cost-effective solution for the project.
